Chapter4: Scan Mode

1、 Manual Reading Mode

Manual mode-keep button down, press the button to trigger the reading, and release the button to end the reading. If the reading time is successful or the reading time exceeds the single reading time, the reading will end.

*Manual mode-Keep button down

Manual mode - Button trigger, press the button to trigger to read, release the button but not end reading, When reading success or reading time exceeds the single reading time, reading ends.

Manual mode-Button trigger

* Enable single reading time

Unlimited Scan Time

Enter Setup

Set reading time 1000ms

Set reading time 2000ms

Set reading time 3000ms

*Set reading time 6000ms

Set reading time 10,000ms

Set One Reading Time(100ms ~ 25,500ms)

* Only Read One Code

Exit Setup

Enter Setup

Enable Batch Reding code

Max 2 codes

Max 5 codes

Max 10 codes

Max 16 codes

* Max 32 codes

Set any number

Exit Setup

Enter Setup

After jumping from other modes to manual mode, it is allowed to return to the original mode after a period of off time. Read the following setting code to select different delays. The default time is 4000ms

After off 500ms to return

After off 1000ms to return

After off 2000ms to return

After of 3000ms to return

Set Return Delay (100ms ~ 5,000ms)

Exit Setup

Enter Setup

2、Continuous Scanning Mode

Continuous Scanning Mode, no manual trigger required, When reading succes or after the end of single code reading time, will automatically start the next reading. (Continuous scanning period can switch to manual mode by press the button temporary.)

Continuous Mode

*Temporary switching Manual mode

Do Not Temporary switching Manual Mode

Single reading time

In continuous scanning mode,the maximum amount of time that continuous recognition is allowed before successful reading.

Set reading time 1,000ms

Set reading time 2,000ms

Exit Setup

Enter Setup

Set reading time 3,000ms

* Set reading time 6,000ms

Set reading time 10,000ms

Set reading time 20,000ms

Set Single Reading Time (100ms ~ 25,500ms)

Read interval setting

The space time between two readings, that is, after the last reading (whether the reading is successful or not), there is no reading within the setting space time, and the next reading is not conducted until the end of the space time.

Set Space time 0ms

Exit Setup

Enter Setup

Set Space time 100ms

Set Space time 200ms

* Set Space time 500ms

Set Space time 1,000ms

Set Space time 2,000ms

Set Space time (0ms ~ 4,000ms)

Exit Setup

Enter Setup

The same bar code reading delay time

In order to avoid repeated reading of the same barcode, when reading the same barcode again, only when the space time is longer than the delay time, can reading be allowed.

Set Same Code Delay time 0ms

Set Same Code Delay time 500ms

*Set Same Code Delay time 1000ms

Set Same Code Delay time 2000ms

Set Same Code Delay time 3000ms

Exit Setup

Enter Setup

Set Terminal TAB

Set Terminal CR+CR

Set Terminal CR+LF+CR+LF

Set Terminator Character (1-8 bytes)

6、Prefix/Suffix Setting

Prefix/suffix is a user-defined modified character string before or after decoding information, which can be added by scanning "Enable prefix" or "Enable suffix" setting code.

Set prefix/suffix, scan setting codes of "set prefix" or "set suffix", and combine the scanning numeric setting codes, set these values, and scan a four-digit (i.e., four bar codes) corresponding to ASCII values.

eg: The value of the letter A is 1065, Scan the code 1 0 6 5 sequentially, see [Appendix 2: ASCII Table](#) and [Appendix 1: Set Digital Code](#)
